by Reconomy

Reverse
vending is
as easy as
1, 2, 3.

- 1  Load empty
beverage containers
into the chute
- 2  The barcode is
scanned and the
product is weighed
and processed
- 3  The machine issues
a reward voucher
or a digital credit

Swap your empties for exciting rewards

High performance machines that are super simple to use

Reverse vending machines, or RVMs, are highly efficient recycling machines that are used by the general public to deposit empty, single-use beverage containers in return for a pre-paid deposit or non-monetary reward – for example vouchers, discounts, credit or charity donations.

Once the machines are full, the compacted bottles and cans are collected for onward recycling.

They play an important role in regions that run Deposit Return Schemes (DRS). For retailers, convenience stores and other shopping locations, you will likely, as part of a DRS, have responsibility for the recycling of plastic, aluminium and sometimes glass that is put onto the market.

Delivering smart insights

via our online platform

Recycling reports

Trend data

Status notifications

Machine diagnostics

Advertising control

RVMs are used in over 40 countries, typically as part of a DRS, and are all reporting impressive levels of user engagement and greatly increased recycling rates.

EcoVend doesn't just look smart, it thinks smart too – with clever insights and easy operation, it will let you know what products people are buying and recycling, so you know what to stock.

The benefits speak for themselves:

- ⌘ Eye catching design for maximum user engagement
- ⌘ Fully touchless operation available to support virus control
- ⌘ Step-by-step user voice command option for accessibility
- ⌘ Advertising opportunities through centrally controlled integral screens and backlit poster panels
- ⌘ Simple by design technology improves reliability and maintenance time
- ⌘ Wrapping for commercial branding or public information purposes available
- ⌘ Cleaning is also super simple, easy to open and removable bins mean easy access. It even sends you a message when the bin is full and ready for emptying
- ⌘ Easily accessible and DDA (Disability Discrimination Act) compliant

On the go drinks are super convenient, but using a waste bin means **you can't 100% guarantee that your empty can or bottle will be recycled.**

Now you can feel satisfied that you are doing your bit for the environment, whilst also **helping your customers by recycling their waste.**

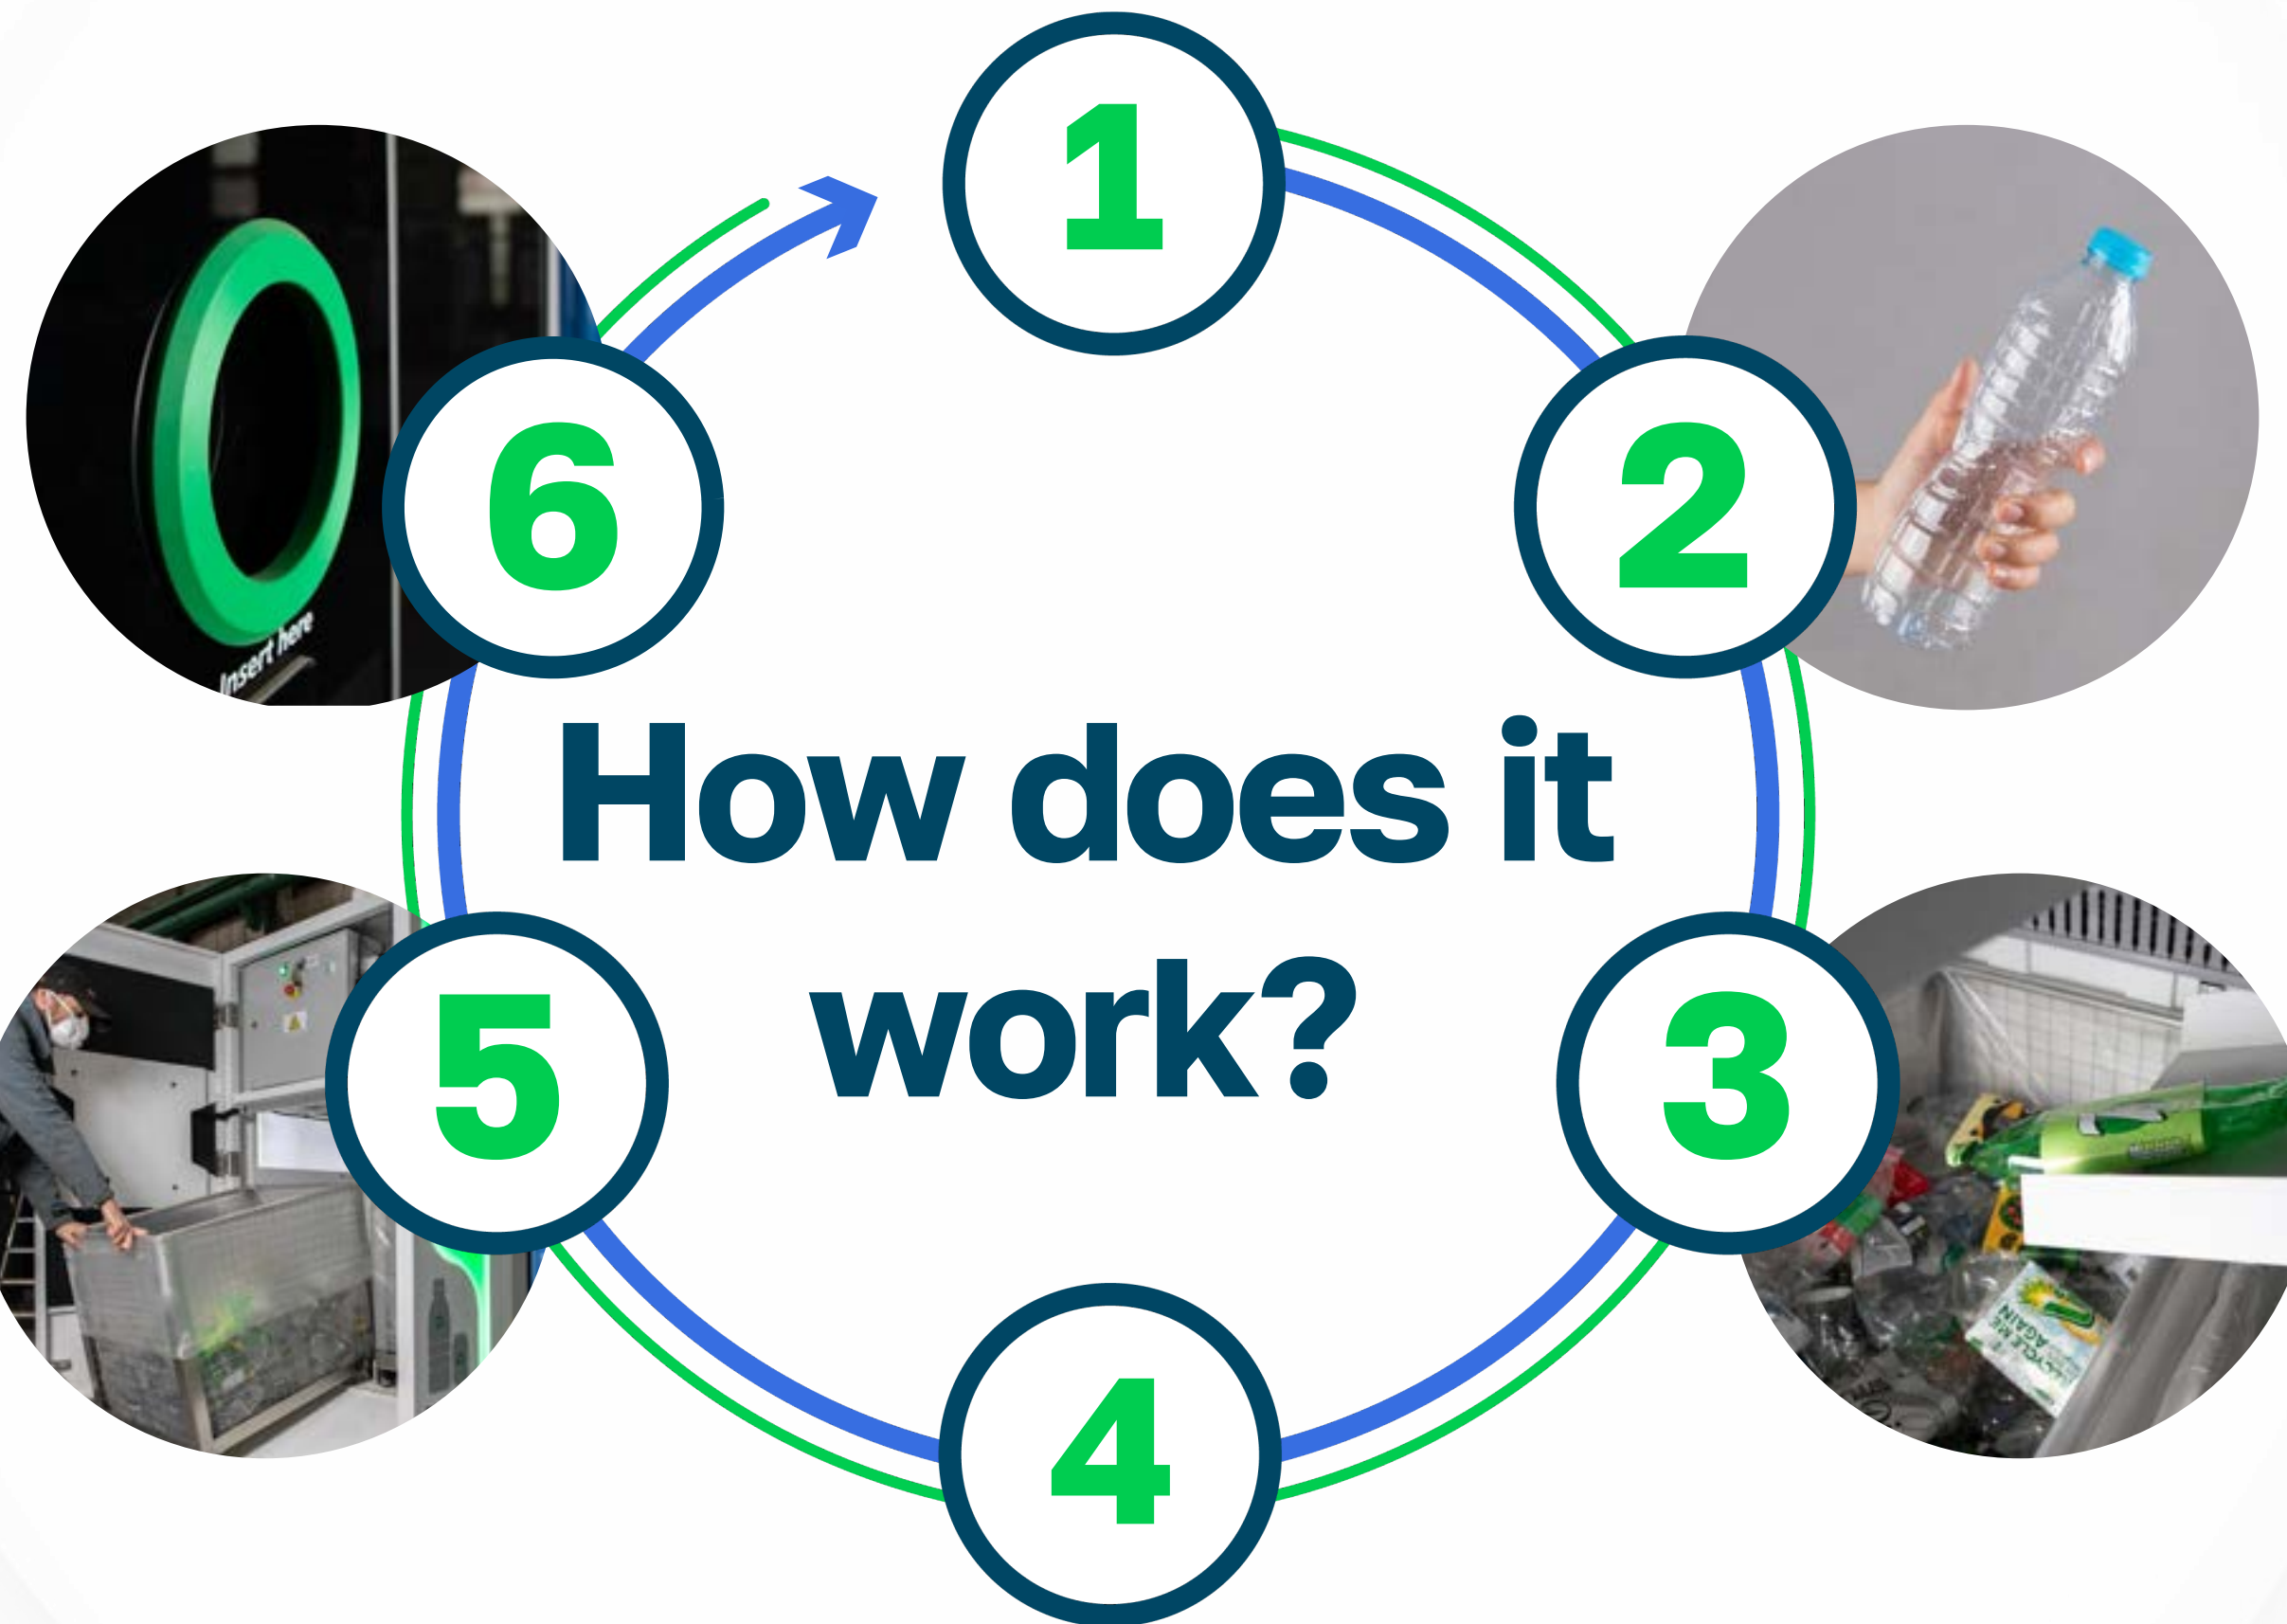

These items are sent for reuse and recycling, where they are then **returned back into shiny new products.**

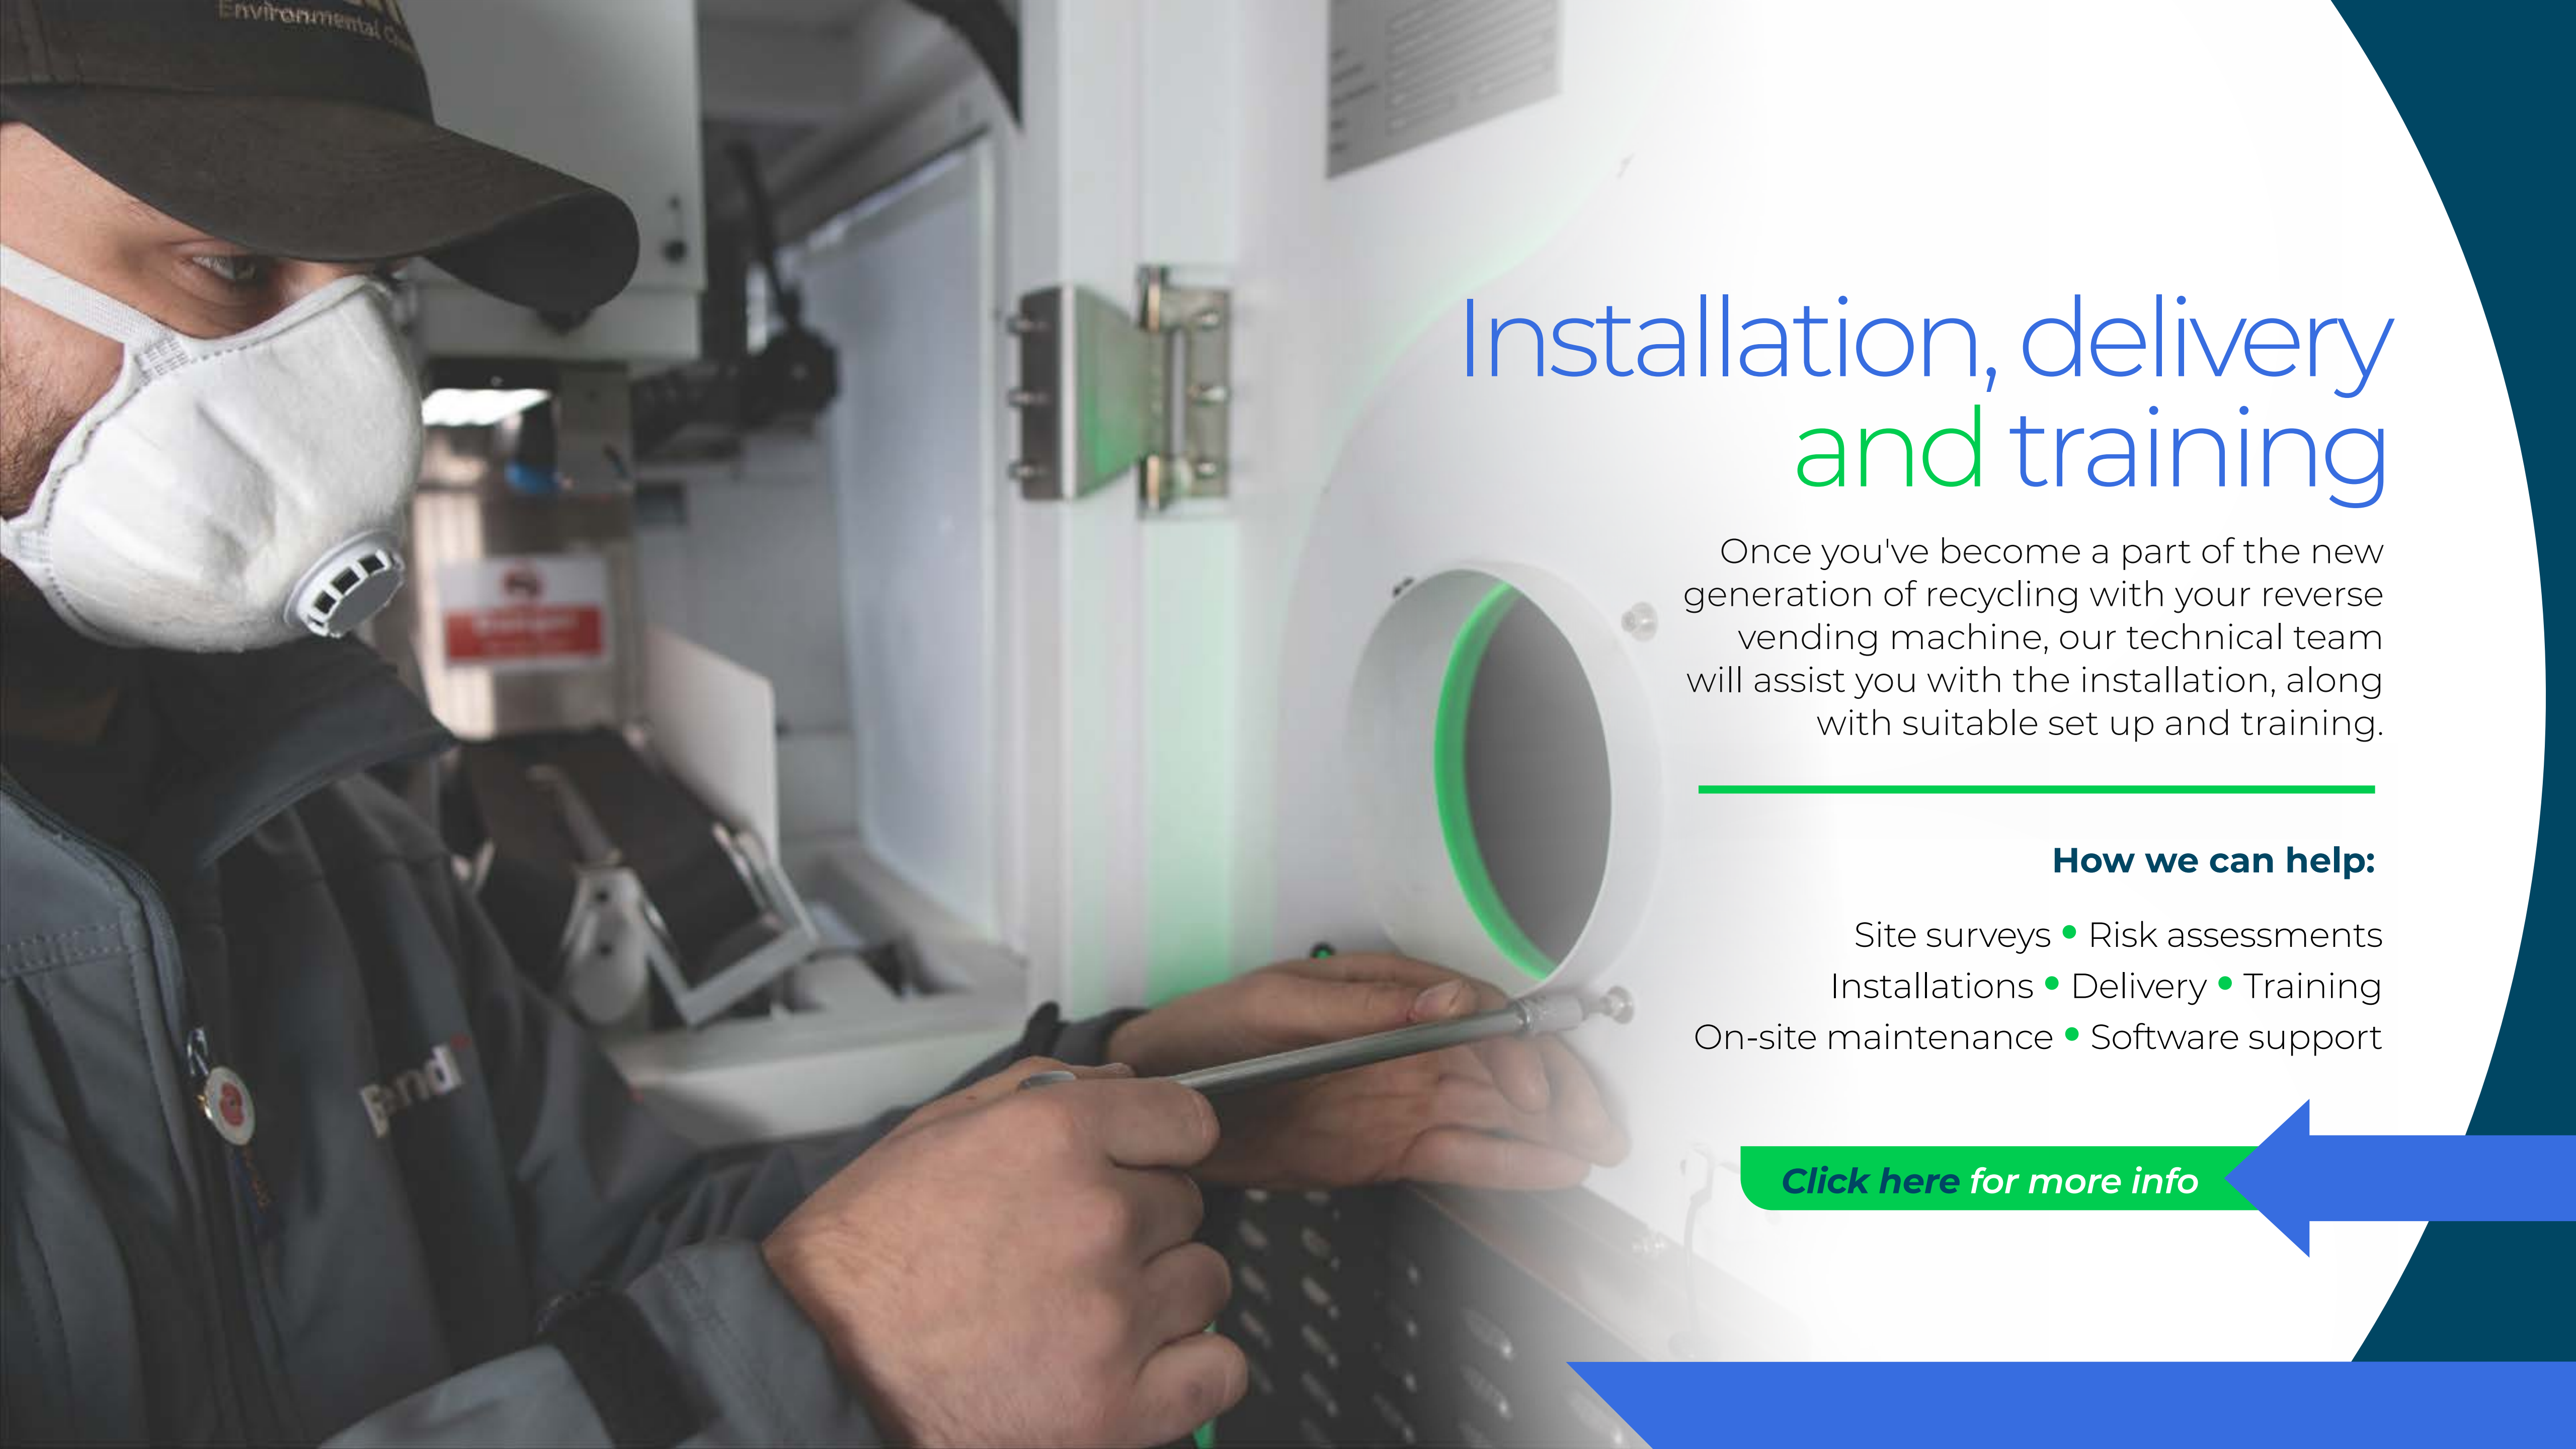

How does it work?

Customers can then receive their reward or retrieve their deposit (where a DRS is in place) encouraging the whole process to **start again.**

Your customers can deposit their unwanted, empty containers in a **smart new EcoVend**, located either inside or outside your store.

Our machines carefully segregate the plastic, glass and aluminium to achieve up to a **97% return rate.**

Installation, delivery and training

Once you've become a part of the new generation of recycling with your reverse vending machine, our technical team will assist you with the installation, along with suitable set up and training.

How we can help:

Site surveys • Risk assessments
Installations • Delivery • Training
On-site maintenance • Software support
